Installation (All QR Code fonts require a 2 step installation process)

1. **Install the QR Code font.** Extract all files from the compressed ZIP download. Windows users should right-click on the font and choose Install. Mac users should double-click on the font and choose the "Install font" button at the bottom of the font preview. Other operating systems refer to the [Font Installation Procedures](#).
2. **Implement a Font Encoder.** Font encoders convert the data that is to be encoded into a text string that will generate the correct symbol when combined with the QR Code font. A free font encoder is [provided on this page](#) to generate symbols 1 at a time. To generate symbols dynamically with [other available font encoders](#), a license is required.

Implementation

1. When using the [free font encoder](#), enter the data that needs to be encoded in the QR Code and choose the Encode Data button.

Encode Data

<https://www.idautomation.com/barcode-fonts/2d/qr-code/free/>

2. Copy the result to the clipboard and paste into the desired application.

```
